Abstract. We study the asymptotic behavior of the eigenvalues of the Laplacian operator on a domain in the plane as the domain approaches a point. The eigenvalues are shown to converge to the eigenvalues of the Laplacian operator on the unit disk.

Abstract. We study the asymptotic behavior of the eigenvalues of the Laplacian operator on a domain in the plane as the domain approaches a point. The eigenvalues are shown to converge to the eigenvalues of the Laplacian operator on the unit disk. This result is used to prove the existence of a limit function for the eigenfunctions of the Laplacian operator on a domain in the plane as the domain approaches a point.
